

MicroFrance™ Sataloff Indirect Laryngeal Instrument Set

Introducing the MicroFrance™ Sataloff Indirect Laryngeal Instrument set. This set has been designed in conjunction with Dr. Robert T. Sataloff in order to provide laryngeal physicians with an indirect laryngeal set for office-based procedures. This is the first complete set of laryngeal instruments that will allow the surgeon the capability of performing these procedures in an office setting. The combination of forceps, scissors and suction instruments provide the ideal amount of instrumentation to accomplish most indirect laryngeal procedures. Additionally, the instruments are fixed at a 110° angle that affords the physician the ability to gain better access to the laryngeal region in order to perform biopsies and examinations. This set will also complement the existing Sataloff Laryngeal Instrument Set in the Operating Room.

ordering information

MCLS48	Sataloff fixed handle
MCLS49	Sataloff Indirect Cupped Forceps, Straight
MCLS50	Sataloff Indirect Cupped Forceps, Left
MCLS51	Sataloff Indirect Cupped Forceps, Right
